

Results Arabian Night dahlia pilot Growing season 2018

Delphy Flower Bulbs and Tubers has conducted a statistical block design pilot study on Arabian Night dahlia cuttings comprising treatments with 9 different bio-stimulants. The First-Tree plots (four randomly distributed replicates) were treated four times with the GOOD FOR GREENS® plant growth regulator. After lifting the treated and control tubers were collected and weighed. The results are graphically shown below.

The graph shows that the GOOD FOR GREENS® plant growth regulator produces a considerable increase in weight..

Total weight of the treated sample is 6762 g for 24 tubers. The control sample has 5756 g for the same number of tubers, meaning an overall increase of 1006 g or 17.5% .

Conclusion: The GOOD FOR GREENS® plant growth regulator increases weight in Arabian Night dahlia tubers by 17.5% .
