

Results Regina cherries

Growing season 2017

A cherry orchard in the Netherlands planted with the variety Regina was treated four times with the GOOD FOR GREENS® plant growth regulator. After harvest, a random sample of each treated and control cherries was manually sorted and individually weighed. The results are graphically shown below.

Graph 1 shows that the GOOD FOR GREENS® plant growth regulator results in larger cherries.

The total weight of the control sample is 3.698 g. An equal number of treated cherries weighs 4.545 g, hence the GOOD FOR GREENS® plant growth regulator provides 847 g more fruit weight (23%).

Conclusion: The GOOD FOR GREENS® plant growth regulator increases the yield of Regina cherries by 23%.
