

# Results Conference pears

## Growing season 2017

A pear orchard in the Netherlands planted with the variety Conference was treated four times with the GOOD FOR GREENS® plant growth regulator. After harvest, a random sample of each treated and control pears was manually sorted and individually weighed. The results are graphically shown below.

Graph 1 shows that the GOOD FOR GREENS® plant growth regulator results in larger pears.

The total weight of the control sample is 16.273 g. An equal number of treated pears weighs 19.760 g, hence the GOOD FOR GREENS® plant growth regulator provides 3.487 g more fruit weight [21%].

**Conclusion:** The GOOD FOR GREENS® plant growth regulator increases the yield of Conference pears by 21%.
